

Comprehensive information  
on fire-rated assemblies  
incorporating USG products  
and systems

# Fire-Resistant **Assemblies**

One of the most critical issues for architects is ensuring that building design addresses fire-safety issues. This resource lists fire-resistant assemblies using USG products and systems, as well as the related evaluation reports. The results of acoustical tests are also included, where relevant.

# Fire Safety

# User's Guide

Use this brochure to determine fire ratings for USG products and systems.  
This brochure provides:

- Comprehensive information about fire-rated assemblies
- Product and system attributes to help you identify the system that meets your project requirements for life safety, structural performance and acoustics
- Easy access to USG's technical information or to specific data

# Fire Protection

USG is the undisputed leader among building material manufacturers in providing products and systems designed to keep people safe from fire.

Fire-safety properties are described in terms of fire resistance, surface-burning characteristics and noncombustibility.

<b>Fire Safety</b>	<b>Building assembly's fire resistance</b>	The period of time the assembly will serve as a barrier to the spread of fire and how long the assembly can function structurally after it is exposed to a fire of standard intensity as defined by ASTM E119. Sometimes this is also called the assembly's fire endurance.
	<b>Flame spread</b>	The measure of a material's relative burning behavior. Both the flame spread and smoke developed are measured in accordance with ASTM E84.
	<b>Noncombustible material</b>	A material that will not burn or contribute any appreciable amount of fuel to a fire, as determined through ASTM E136.
	<b>Class A designation</b>	Refers to material that may ignite but will not sustain a flame. Class A products will not generate excessive visibility-obscuring smoke, an important factor in designing safe egress for building occupants. Class A is not a fire-resistance designation.

<b>Fire-Rated</b>	Fire-resistance ratings have long been used by UL, ASTM and building codes to measure the performance of various constructions for fire containment purposes. As applied to elements of buildings, the fire-resistance rating classifies the ability of an assembly to confine and isolate fire within a zone comprised of fire-resistance rated walls, ceiling and floor assemblies. The ratings relate to fire tests designed to determine how quickly fire can raise the temperature to unacceptable levels. Fire-rated assemblies are tested and certified in their entirety. These designs are identified in the UL Fire Resistance Directory, which is updated yearly and can be referenced at the Underwriters Laboratories website at <a href="http://ul.com">ul.com</a> .
	For additional information on USG fire-rated assemblies, CAD, BIM content and specifications, visit USG Design Studio at <a href="http://usgdesignstudio.com">usgdesignstudio.com</a> .

<b>For More Information</b>	If you have additional questions regarding fire protection, use the following resources:

<b>Industry Resources</b>	Underwriter Laboratories, Inc. Fire Resistance Directory, Volume One

# Selector Overview

The sections listed below correspond to the different types of assemblies in which USG products are tested.

Each section is arranged sequentially according to fire ratings, the criterion that most often governs selection. Each entry within a section contains a reference to the source for more information within the Architectural Reference Library binder.

		Pages
A	<b>Partitions</b>	<b>9-23</b>
		Steel-framed, including non-loadbearing, loadbearing and chase walls; wood-framed, including non-loadbearing, loadbearing and chase walls; area separation walls; shaft walls; and masonry walls. Includes gypsum base and veneer finishes, gypsum drywall, cement board and conventional lath and plaster.
B	<b>Floors/Ceilings</b>	<b>24-44</b>
		Steel-framed, including steel bar joist framing, steel C-joist framing, and steel truss; wood-framed, including dimensional lumber, engineered joist and truss; and structural concrete.
C	<b>Roof/Ceilings</b>	<b>45-51</b>
		Steel-framed, including steel bar joist framing, steel C-joist framing, steel truss and steel roof deck; wood-framed, including dimensional lumber, engineered joist and truss; and structural concrete.
D	<b>Horizontal Membrane</b>	<b>52</b>
		Shaft wall used in a horizontal plane.
E	<b>Structural Fireproofing</b>	<b>53-56</b>
		Column, beam, through-penetration walls and floors, and joists. Basic methods of protecting columns and beams with gypsum base and veneer finishes, mineral fireproofing, and gypsum drywall.
F	<b>Exterior Walls</b>	<b>57-59</b>
		Steel-framed, including loadbearing and non-loadbearing; and wood-framed, including loadbearing. Includes exterior curtain wall assemblies.
G	<b>Through-Penetration Firestops</b>	<b>60-63</b>
		Mortar-, caulk- and intumescent-type materials that provide reliable firestops.

# Test Certification

<b>Test Conditions and Certification</b>	<p>Fire- and sound-tested assemblies listed in this Selector are based on characteristics, properties and performance of materials and systems obtained under controlled test conditions as set forth in the appropriate ASTM Standard in effect at the time of test. These listings are short summaries to serve as a compilation and guide of construction assemblies available in the selection process. For complete information on construction details and components used in these systems, refer to the individual Folder reference.</p> <p>USG Corporation will provide information for published fire, sound and structural data, covering systems designed and constructed according to its published specifications. Tests are conducted on Company products assembled to meet performance requirements of established test procedures specified by various agencies. System performance following any substitution of materials or compromise in assembly design cannot be certified and may result in failure under critical conditions.</p> <p>Sound tests are conducted under controlled laboratory conditions according to ASTM procedures. Comparable field performance depends on building design and careful attention to detailing and workmanship.</p> <p>Certain sound tests, conducted in accordance with ASTM methods, measured sound transmission of 11 frequencies. This data has been retained in this Selector to serve as a guide to the designer. Based on experience, the STC values are very close to those obtained for the assembly under current methods at 16 frequencies.</p> <p>Sound ratings shown for steel-framed partitions apply to systems constructed with 25 gauge steel studs 24" o.c., unless otherwise noted. Heavier gauge studs are more rigid and may not provide the same sound ratings.</p>																																																																																																																																																						
<b>Abbreviations</b>	In the Selector, the following abbreviations may be used. # Good Design Practices

Use this section as a reference.

<b>1</b>	<b>Horizontal or Vertical Orientation</b>	Two recent tests permit SHEETROCK gypsum panel products and IMPERIAL gypsum base products to be applied horizontally or vertically in partitions without compromising the fire rating. These tests are UL Design U419 for non-loadbearing partitions and UL Design U423 for loadbearing partitions. When either of these tests are listed with a USG system, it means that the system can now be built with the panels oriented in either direction.
<b>2</b>	<b>Staggering</b>	The two fire tests indicated above also demonstrated that when FIRECODE or FIRECODE C Core products are used, the horizontal joints on opposite side of the studs need not be staggered (as was previously required).
<b>3</b>	<b>DUROCK Substitution</b>	In partitions indicating the use of 1/2" DUROCK cement board, it is permissible to substitute 5/8" DUROCK cement board without compromising the fire rating.
<b>4</b>	<b>FIBEROCK or MOLD TOUGH Substitution</b>	In partitions or column protection indicating the use of 5/8" SHEETROCK FIRECODE Core gypsum panels or 1/2" SHEETROCK FIRECODE C Core gypsum panels, it is permissible to substitute 5/8" FIBEROCK abuse-resistant gypsum interior panels or 5/8" SHEETROCK MOLD TOUGH FIRECODE Core gypsum panels without compromising the fire rating.
<b>5</b>	<b>Sheathing Substitution</b>	Note that in partitions indicating the use of SHEETROCK exterior sheathing or DUROCK cement board for sheathing applications, it is permissible to substitute 5/8" FIBEROCK AQUA-TOUGH sheathing without compromising the fire rating.
	<b>Liner Panel Substitution</b>	Note that in partitions indicating the use of SHEETROCK gypsum liner panels, it is permissible to substitute SHEETROCK MOLD TOUGH gypsum liner panels or SHEETROCK glass-mat liner panels without compromising the fire rating.
<b>6</b>	<b>Thermal Insulation</b>	Where thermal insulation is shown in assembly drawings, the specific product is required to achieve the stated fire rating. Glass fiber insulation cannot be substituted for mineral wool insulation.
<b>7</b>	<b>Ceiling Runners</b>	In fire-rated non-loadbearing partitions, steel studs should not be attached to ceiling runners.
<b>8</b>	<b>Multi-Layer Applications</b>	In multi-layer applications, only the joints of the face layer need be finished.
<b>9</b>	<b>Perimeter Caulking</b>	Use SHEETROCK Acoustical Sealant to caulk perimeters for attenuation of sound. Proper use as perimeter caulking will not affect any intended fire-resistive ratings.
<b>10</b>	<b>FIRECODE C Core Substitution</b>	It is permissible to substitute 5/8" FIRECODE Core panels for 1/2" FIRECODE C Core panels. There is no permissible substitution for 5/8" FIRECODE C Core panels.
<b>11</b>	<b>Veneer Plaster</b>	Whenever veneer plaster is specified, IMPERIAL gypsum base should also be specified. Where a fire-resistive rating is required, use the appropriate IMPERIAL gypsum base as tested.
<b>12</b>	<b>More Information</b>	For specific information regarding the assemblies shown in this folder, consult the current UL Fire Resistance Directory.

# Metric Conversions

## USG Corporation Metric Policy

USG Corporation supports the intent of the metric conversion program. USG has manufactured metric-sized products for export for many years on a special-order basis. USG will make every reasonable effort to make metric products available to the federal market on a special-order basis.

USG interiors, Inc., is prepared to offer metric sizes in most of its acoustical panel and suspension systems.

From United States Gypsum Company, metric width and length SHEETROCK gypsum panel products will be available from designated manufacturing plants throughout the United States. Metric length DUROCK cement board products will also be available from designated manufacturing plants. Certain minimum-order quantities and service charges may apply, as determined by local market conditions.

Bag and pail products, including SHEETROCK joint treatment products, spray textures, gypsum plasters and other products carry soft metric designations for size and/or weight.

**Important:** The basic USG product line remains unchanged—standard foot/inch/pound products previously available from USG will still be readily available. The addition of metric length/width products will allow us to supply all job requirements, whether standard or metric.

USG Corporation will offer assistance to construction professionals with regard to design, specification and installation issues involving our metric products, just as we always have with our standard products.

## Metric Equivalents

SHEETROCK gypsum panels			
Dimension	Conversion Type <sup>a</sup>	ft./in.	mm <sup>b</sup>
Thickness	Soft	1/4"	6.4
		3/8"	9.5
		1/2"	12.7
		5/8"	15.9
		3/4"	19.1
		1"	25.4
Width	Hard	24"	600.0
		48"	1200.0
Length	Hard	8'	2400.0
		10'	3000.0
		12'	3600.0
Steel Stud Framing			
Thickness (gauge)	Soft	.0179" (25)	.45
		.0270" (22)	.69
		.0329" (20)	.84
Width	Soft	1-5/8"	41.3
		2-1/2"	63.5
		3-1/2"	88.9
		3-5/8"	92.1
		4"	101.6
Length	Hard	8'	2400.0
		10'	3000.0
		12'	3600.0

## Insulation

Dimension	Conversion Type <sup>a</sup>	ft./in.	mm <sup>b</sup>
Thickness	Soft	1"	25.4
		1-1/2"	38.1
		2"	50.8
		2-1/2"	63.5
		3"	76.2
		3-1/2"	88.9
		4"	101.6
		5-1/4"	133.3
		6"	152.4
Width	Hard	16"	400.0
		24"	600.0
Length	Hard	48"	1200.0

## Notes

(a) Conversion Type: "Soft" is metric relabeling with no physical change of dimension; "hard" is a physical change to the metric dimension shown.  
 (b) Conversion factors: inches x 25.4 = mm; feet x 304.8 = mm.

**Availability:** Items above are not stocked in metric lengths or widths. Minimum quantity orders may be required. Leadtime should be determined; service charges may apply. Geographic availability may vary and should be verified for the project location.

**Lengths:** Shown on SHEETROCK gypsum panels and steel stud framing for illustration purposes only.

**Framing Spacing:** 16" o.c. converts to 400 mm o.c.; 24" converts to 600 mm o.c.

## For More Information

Check current printed USG literature for more information on product sizing and availability. Information on specific metric product availability in your market area may be obtained from USG sales or customer service representatives. For information, call toll-free:
