Steel Framing and Metal Lath

California Expanded Metal Products Co. Inc., commonly known as CEMCO, was founded in 1974. CEMCO is the leader in quality, service, and product development, always striving to deliver the cutting-edge solutions that save both time and money during the entire construction process. Our commitment to quality control and the use of mill-certified prime steel ensures stellar product performance long after the project is finished.

CEMCO manufactures all of our products in the USA in each of our four state-of-the-art facilities located in City of Industry, CA, Pittsburg, CA, Denver, CO, and Ft. Worth, TX.

CEMCO is one of the few manufacturers to produce all of our products from high quality mill-certified PRIME hot-dipped galvanized steel. Our products are manufactured to the stringent tolerances established by the American Iron and Steel Institute, and the most recent IBC, IRC, and CBC Building Codes.

We are proud to offer one of the broadest product lines available in the cold-formed steel-framing industry. Each of our products has been manufactured here in the USA, and typically qualifies for credits in the Leadership in Energy and Environmental Design program, commonly known as LEED. Our metal lath, plastering accessories, and water management products are manufactured to handle both interior and exterior applications. Like all CEMCO products, they're produced from high-quality, mill-certified hot-dipped galvanized PRIME steel to guarantee proper performance long after the finish coat is applied.

With our state-of-the-art facilities, CEMCO can handle any size construction project. We distribute products throughout the United States, Canada, Mexico, and the Pacific Rim. Our products are available only through building material dealers, who work closely with contractors on technical assistance, specifications and submittals.

All of our CEMCO literature, product data, and catalog information are located on our website at www.cemcosteel.com.

DISCLAIMER

All data, specifications, and details contained in this publication are intended as a general guide for using CEMCO cold-formed steel framing products and accessories. These products are not to be used in design or construction without an independent evaluation by a licensed and qualified engineer or architect to verify the suitability of a particular product for use in a specific application. CEMCO and its entities assume no liability for failure resulting from the use or misapplication of computations, detail drawings, and specifications contained herein. This publication contains the latest information available at the time of printing. CEMCO and its entities reserve the right to make changes or modifications to the materials of any of its products without prior notice or obligation. Contact CEMCO at 800-775-2362 or www.cemcosteel.com for the latest information on these or any other CEMCO products.

Introduction To CEMCO Nomenclature

CEMCO and other industry leaders have developed a four part identification code which identifies the size (both depth, and flange width), style, and material thickness of each member.

Example:

MEMBER DEPTH:

(Example: 6" = 600 x 1/100 inches)

All member depths are taken in 1/100 inches.

For all "T" sections, member depth is the Inside to inside dimension.

600 S 162 - 54

FLANGE WIDTH:

(Example: 1 5/8" = 162 x 1/100 inches)

All flange widths are taken in 1/100 inches.

STYLE:

(Example: Stud or Joist Section = S)

The four alpha characters utilized by the Designator system:

Designator system:

S = Stud or Joist Sections

T = Track Sections

U = Channel Sections

F = Furring Channels Section

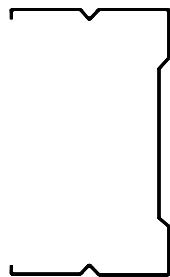

MATERIAL THICKNESS:

(Example: 0.054 in. = 54 mils; 1 mil = 1/1000 in.)

Material thickness is thickness in mils. Minimum base metal thickness represents 95% of the design thickness.

Note: For those sections where two different yield strengths (33 ksi and 50 ksi) are shown, the yield strength used in the design, if greater than 33 ksi, needs to be identified on the design and ordering of steel. (i.e. 600S162-54 (50 ksi))

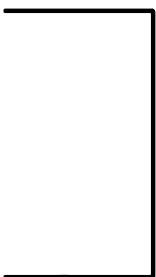

**Stud/Track
S-sections**

**C-Stud/Joist
S-Sections**

**Track
T-Sections**

**Channel
U-Sections**

**Furring Channel
F-Sections**

Code Approvals

Products manufactured by CEMCO are recognized by the ICC Evaluation Services' ICC ES ESR-3016 and under the tolerances of a code compliance program. Code approvals include 2009 IBC, 2012 IBC, 2010 CBC, 2009 IRC.

Material Specifications

Products manufactured by CEMCO are formed from hot-dipped galvanized steel meeting or exceeding the following ASTM, AISI standards, UL, Intertek, and additional code approval agencies.

Structural members are coated to meet the minimum code requirements, higher corrosion protection coating such as G90 are available upon request.

Product Type	Material Specifications	Min. Yield	Min. Tensile	Min. Metallic Coating Designation
Non-Strutural ASTM C645	ASTM A653, SS Grade 33	33 ksi	45 ksi	G40 ¹
	ASTM A1003, Grade 33 (NS33)	33 ksi	... ⁶	G40 ¹ , A40 ¹ , AZ50 ² , GF30 ³ , T1-25 ⁴ , T2-100 ⁴ , 60G/60G ⁵
	ASTM A653, SS Grade 33	33 ksi	45 ksi	G60 ¹ , A60 ¹
	ASTM A653, SS GRADE 50 Class 1	33 ksi	65 ksi	G60 ¹ , A60 ¹
	ASTM A1003, Grade 33 Type H (ST33H)	33 ksi	45 ksi	G60 ¹ , A60 ¹ , AZ50 ² , GF30 ³
	ASTM A1003, Grade 50 Type H (ST50H)	33 ksi	65 ksi	G60 ¹ , A60 ¹ , AZ50 ² , GF30 ³

1. A653 Standard for steel sheet, zinc coated (galvanized)or zinc-iron alloy (galvannealed) by the hot-dip process
2. A792 Standard for steel sheet, 55% aluminum-zinc alloy-coated by the hot-dip process
3. A875 Standard for steel sheet, zinc-5% aluminum coated by the hot-dip process
4. A463 Standard for steel sheet, aluminum coated by the hot-dip process
5. A879 Standard for steel sheet, zinc coated by the electrolytic process for application requiring designation of the coating mss on each surface
6. A No tensile strength for NS steels

- ASTM C955 (Structural Product)
- ASTM C1007 (Structural Installation)
- ASTM A924/A924M (Coating)
- ASTM A653/A653M (Steel)
- ASTM A1003/A1003M
- ASTM C645 (Non-Structural Product)
- ASTM C754 (Non-Structural Installation)

CEMCO Steel framing products are manufactured according to the AISI specification for the Design of Cold-Formed Steel Structural Member, AISI S100-2007. The 2010 CBC is acceptable for use in fire and sound rated assemblies listed in the Code and Gypsum Association Fire Resistance Design Manual.

UL® testing Standards and UL® Certified Products and Follow-Up Service.

Intertek Fire Endurance Test Program.

LEED® Credits for Cold-Formed Steel Framing Products:

- MR 2.1 & 2.2: Waste Management (2 points).
- EQ Credit 3.1: Construction Indoor Air Quality Management (1 point).
- MR 4.1 & 4.2: Recycled Content (2 points).
- MR 5.1 & 5.2: Regional Materials (2 points).
- SS Credit 1: Site Selection (1 point).

Earn LEED Certification with help from CEMCO

California Expanded Metal Products Co. is proud to be a member of the U.S. Green Building Council and support its LEED program, which aims to improve environmental and economic performance of commercial and residential buildings.

LEED (Leadership in Energy & Environmental Design) certifies buildings that meet the standards utilizing energy, environmental design and products, as defined in the LEED rating system. The use of CEMCO products can help projects accumulate points in specific categories, including Recycled Content and Local/Regional Materials.

Recycled Content

Recycled steel content used in the fabrication of CEMCO cold-formed-steel products are in compliance with the Requirement for Environmental and Recycled Content Materials. CEMCO steel suppliers have indicated that their steel contains 30% to 35% recycled steel. The steel products are manufactured from steel consisting of the following contents:

- 35% Recycled Steel
- 19.8% Post-Consumer
- 14.4% Pre-Consumer

For all the information you need about becoming LEED-certified using steel-framing materials, download a copy of CEMCO's LEED Certification at www.cemcosteel.com or call (800) 775-2362.

Local/Regional Materials

CEMCO serves the Western United States through its primary locations in the City of Industry and Pittsburg, Calif., Ft. Worth, TX and Denver, Colo.

Thickness Table					
Minimum Thickness (mils)	Design Thickness (in.)	Minimum Thickness (in.)	Inside Corner Radii	Gauge No.	Color Code
18	0.0188	0.0179	0.0843	25	None
27	0.0283	0.0269	0.0796	22	Black
30	0.0312	0.0296	0.0781	20- Non-Structural	Pink
33	0.0346	0.0329	0.0764	20- Structural	White
43	0.0451	0.0428	0.0712	18	Yellow
54	0.0566	0.0538	0.0849	16	Green
68	0.0713	0.0677	0.1069	14	Orange
97	0.1017	0.0966	0.1525	12	Red

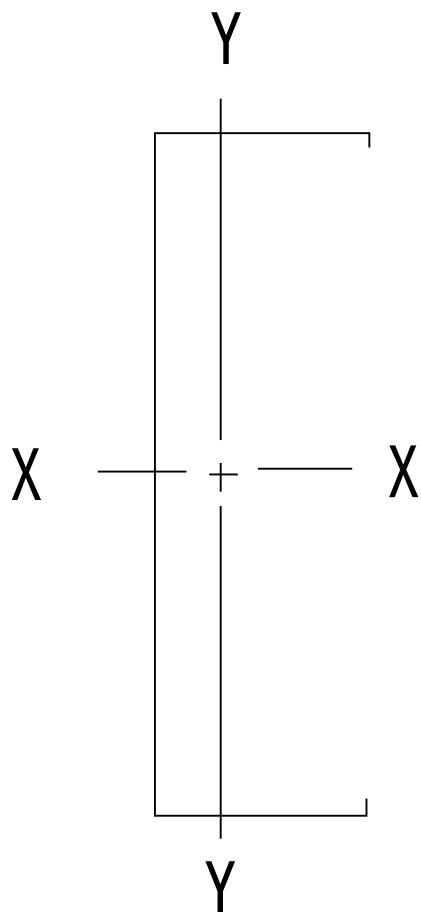

Design Stiffening Lip Length		
Section	Flange Width	Design Stiffening Lip Length (in)
S125	1-1/4"	0.188
S137	1-3/8"	0.375
S162	1-5/8"	0.500
S200	2"	0.625
S250	2-1/2"	0.625
S300	3"	0.875

1. Minimum Thickness represents 95% of the design thickness and is the minimum acceptable thickness delivered to the job site based on A2.4 of the AISI S100-2007.
2. The tables in this catalog are calculated based on the inside corner radii listed on this table.
3. The inside corner radius is the maximum of 3/32-t/2, or 1.5t

General Notes for All Tables

1. The values in this catalog are based on the 2007 edition of the North American Specification for the Design of Cold-Formed Steel Structural Members, AISI S100-07 as referenced by 2009 International Building Code (IBC) and AISI S100-07 with Supplement S2-10 as referenced by 2012 IBC.
2. Where AISI S100 is referenced, it is the "North American Specification for the Design of Cold-Formed Steel Structural Members", S100-07 and AISI S100-07 with supplement S2-10 as applicable with US provisions.
3. The structural properties included in this catalog have been computed based on allowable strength design (ASD) method.
4. Distortion buckling calculations are based on the $K\phi = 0$.
5. The effective moment of inertia for deflection is calculated at a stress which results in a section modulus such that the stress times the section modulus at that stress is equal to the allowable moment AISI S100 Procedure 1 for serviceability determination has been used.
6. Various sections may be manufactured with yield strength of either 33 or 50 ksi. The yield strength used for calculations is indicated in the tables.
7. Conditions with loads that exceed the 10 psf limit for nonstructural members require an approved CP60 coating.
8. When provided, factory punchouts will be located along the centerline of the webs of the members and will have a minimum center-to-center spacing of 24 inches. Punchouts for members greater than 2.5 inches deep are a maximum of 1.5 inches wide x 4.0 inches long. Members with depths of 2.5 inches and smaller are maximum of $\frac{3}{4}$ " wide x 2 inches long. Any configuration or combination of holes that fit within the punchout width and length limitations mentioned above shall be permitted; other punchout configurations and locations not in compliance with limitations listed above is permitted provided it is approved by a design professional.

DEFINITIONS OF STRUCTURAL PROPERTY SYMBOLS

Gross Section Properties

- I_x** Moment of Inertia of the cross section about the X-axis.
S_x Section modulus about the X-axis.
R_x Radius of gyration of cross section about the X-axis.
I_y Moment of inertia of cross section about the Y-axis.
R_y Radius of gyration of cross section about the Y-axis.

Effective Section Properties

- I_{xe}** Effective moment of inertia about the X-axis.
S_{xe} Effective section modulus about the X-axis.
M_{al} Allowable moment based on local buckling.
M_{nd} Nominal moment based on distortional buckling, assuming $K\Phi = 0$.
M_{ad} Allowable moment based on distortional buckling, assuming $K\Phi = 0$. $M_{ad} = M_{nd}/\Omega$ ($\Omega = 1.67$ for members).
M_a Allowable moment for track and channel members, based on local buckling only.
V_{ag} Allowable strong axis shear away from punchout, calculated in accordance with AISI S100 section C3.2.1.
V_{anet} Allowable strong axis shear at the punchout, calculated in accordance with AISI S100 C3.2.1.

Torsional and Other Properties

- J** St. Venant torsional constant. The numbers shown in tables for J, have been multiplied by 1000. The actual values can be obtained by dividing the listed numbers by 1000.
- C_w** Torsional warping constant.
- X_o** Distance from the shear center to the centroid along the principal X-axis.
- m** Distance from shear center to mid-plane of web.
- R_o** Polar radius of gyration of cross section about the shear center.
- B** $1 \cdot (X_o/R_o)^2$
- L_u** Critical unbraced length for lateral-torsional buckling. Members are considered fully braced when unbraced length is less than L_u.
- KΦ** Distortional buckling moment (M_{ad}) is calculated without the beneficial effect of Sheathing to rotational stiffness, KΦ = 0.

Notes:

1. h/t exceeds 200

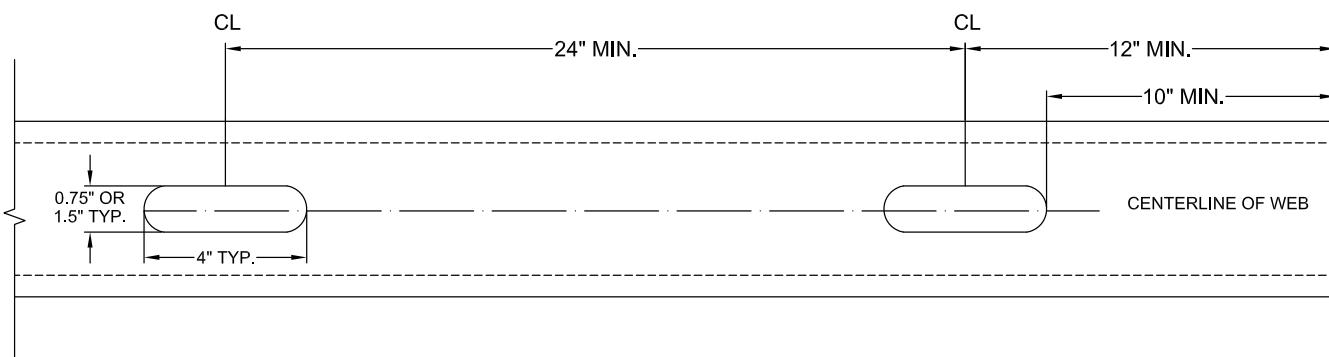

2. h value used for h/t calculation is the flat width of the web. For "S" members, this is the out-to-out member size, minus twice the thickness, minus twice the inside bend radius

3. h/t values exceeding 260 are marked with a dash (-)

4. h/t values in this table apply to S (studs and joists) members only, and do not apply to tracks and channels

Section Property Table Notes

1. Web depth for track sections equals nominal depth plus 2 times the design thickness plus bend radius.
2. The centerline bend radius is based on inside corner radii shown in the Steel Thickness table found in this catalog.
3. Effective properties include the strength increase from cold-work of forming per AISI S100 section A7.2 where applicable.
4. Tabulated gross properties are based on full, unreduced section away from punchouts.
5. Effective properties for all "S" sections based on punched sections. Track sections are considered unpunched.
6. Allowable moment is the lesser of M_{al} and M_{ad} . Stud distortional buckling is based on an assumed $K\Phi = 0$.
7. For deflection determination, use the effective moment of inertia.
8. For sections with properties listed for both 33ksi and 50 ksi yield point, the required yield point should be specified in the design documents.
9. Where effective properties are not listed for a section at 33 ksi or 50 ksi, web-to-thickness limits from the AISI S100 are exceeded, only gross properties are available.

Natasja

- Notes:**

 1. h/t exceeds 200
 2. h value used for h/t calculation is the flat width of the web. For (S) members, this is the out-to-out member size, minus twice the thickness, minus twice the inside bend radius
 3. h/t values exceeding 260 are marked with a dash (-)
 4. h/t values in this table apply to S (studs and joists) members only, and do not apply to tracks and channels

Structural Section Properties for Studs

Notes:

1. h/t exceeds 200
2. h value used for h/t calculation is the flat width of the web. For (S) members, this is the out-to-out member size, minus twice the thickness, minus twice the inside bend radius
3. h/t values exceeding 260 are marked with a dash (-)
4. h/t values in this table apply to S (studs and joists) members only, and do not apply to tracks and channels

Curtain Wall, Non - Composite Wall Limiting Height Tables Notes

1. Studs considered single spanned and unpunched for web crippling and shear.
2. Listed wind pressures represent 1.0 W calculated based on 2009 IBC or 0.6 W calculated based on 2012 IBC. For deflection calculations, listed wind pressures, have been reduced by 0.70 as allowed by IBC. The 5 psf pressure has not been reduced for deflection checks.
3. Web-height thickness ratio exceeds 200. Web stiffeners are required at all support points and concentrated loads. Where limiting heights are followed by "e", web stiffeners are required at ends.
4. Limiting heights based on studs braced against rotation and lateral movement at support with properly fastened sheathing on both flanges over the full height. Studs are assumed to be adequately braced at a maximum spacing of Lu to develop full allowable moment, Ma.
5. Limiting heights are based on steel properties only (non-composite).
6. Studs are assumed to be adequately braced at a maximum spacing of Lu to develop full allowable moment, Ma.
7. Web crippling check is based on 1" of bearing at end supports and 3" of bearing at interior support.
8. Shear and web crippling capacity at end supports have NOT been reduced for punchouts. Shear and web crippling capacity at interior support have been reduced for the presence of punchout adjacent to the support.
9. Combined bending and shear check at interior support is based on unreinforced web per AISI S100 (Eq. C.3.3.1-1). Shear capacity and combined bending and shear check at interior support have been reduced for the presence of punchouts adjacent to support.
10. Allowable moment is lesser of MaL and MaM. Stud distortional buckling is based on an assumed KΦ=0.

Various Types of Wall Bracing

Combined Loading Allowable Axial Load Table Notes

1. Allowable axial loads listed in kips 1 KIP = 1000 lbs.).
2. Allowable axial loads listed are based on simple one span condition.
3. Allowable axial loads determined in accordance with section C5 of AISI S100 and the assumption that axial load passes through centroid of the effective section.
4. Allowable axial loads are based on 4'-0" on center bracing. K_{Ly} and K_{Lt} = 48 inches.
5. Studs are assumed to be adequately braced at a maximum of spacing of L_u to develop allowable moment, M_a .
6. Listed wind pressures represent 1.0 W calculated based on 2009 IBC or 0.6 W calculated based on 2012 IBC. For deflection calculations, listed wind pressures have been reduced by 0.70 as allowed by IBC. The 5 psf pressure has not been reduced for deflection checks.
7. End supports have not been checked for web crippling. See web crippling tables in this catalog.
8. Listed lateral pressures and axial loads have not been modified for strength checks based on wind/earthquake or multiple transient loads.

NOTES:

1 Deflection exceeds L/120 3 Deflection exceeds L/360 7 Deflection exceeds L/720 Lateral Load Multiplier - Strength = 1
 2 Deflection exceeds L/240 6 Deflection exceeds L/600 Axial Load Multiplier = 1 Lateral Load Multiplier - Deflection = 1.0

Floor Joist Bridging and Bracing Notes:

1. Bracing members shall be designed in accordance with section D3 of AISI S100.
2. Minimum number of rows required is shown in table, additional rows of bridging may be required by design.
3. All connections MUST be designed by a licensed professional engineer.

Span (ft)	Minimum Number of Rows
Up to 16'	1 row at the mid-span
16' to 24'	2 rows at 1/3 points
24' to 32'	3 rows at 1/4 points
Over 32'	Consult your Engineer of Record

NOTES:

1. TOP STRAP NOT REQUIRED IF TOP SIDE IS FULLY/CONTINUOUSLY SHEATHED.
2. PLACE SOLID BLOCKING ADJACENT TO ALL OPENINGS AND TWO BAYS AT ENDS OF JOIST SYSTEM

Floor Joist Span Table Notes

1. Spans are based on continuous support of compression flange over the full length of the joist.
2. Spans are based on tension flange laterally braced at maximum spacing of 8'-0".
3. Joists must be braced against rotation at all supports.
4. End shear and web crippling capacity have not been reduced for punchouts.
5. End web crippling check is based on 3-1/2" end bearing.
6. "e" indicates web stiffeners are required at end supports.

7. Web stiffeners are required at interior support. Combined bending and web crippling check is not required when web stiffener is provided.
8. Shear capacity at interior support has been reduced for the presence of punchouts adjacent to the supports. Combined bending and shear check is based on unreinforced web in accordance with section C3.3.1 of AISI S100.
9. Total load deflection limited to L/240. Live load deflection limit as noted.
10. Alternate span live loading has been considered for two equal span conditions.
11. Stud distortional buckling based on assumed $K\phi = 0$.

Allowable Floor Joist Spans 10 psf Dead Load and 20 psf Live Load

Web Crippling Table Notes

1. Listed allowable loads apply only to members with stiffened flanges (i.e. S-sections).
2. For back-to-back members, the listed loads are for the entire two-member assembly.
3. Listed allowable loads are based on members "fastened to supports".
4. For back-to-back members, the distance between the web connectors and the flange shall be kept to a minimum.
5. For listed punchout reductions factors, R_c , x is the nearest distance between the web hole and edge of bearing in inches.
6. Listed allowable loads are for unpunched webs. Capacity reductions for end and interior one flange loading (Conditions 1 & 2) near punchouts are listed per AISI S100 Section C3.4.2.
7. "h" refers to the flat dimension of the web. See web-to-depth Thickness Ratio table in this catalog.

Notes

1. Condition 1 - End Reaction - One Flange Loading
2. Condition 2 - Interior Reaction - One Flange Loading
3. Condition 3 - End Reaction - Two Flange Loading
4. Condition 4 - Interior Reaction - Two Flange Loading

Allowable Web Crippling Loads - Single Members

Allowable Ceiling Spans Deflection Notes

1. For unbraced sections, allowable moment based on AISI S100 section C3.1.2 with unbraced length = listed span. For mid-span braced sections, allowable moment based on AISI S100 section C3.1.2 with unbraced length = (listed span)/2.
2. For spans listed with "e", web stiffeners are required at end reactions.
3. Web crippling calculation based on bearing length = 1 inch.
4. Web crippling and shear capacity have not been reduced for punch-outs. If web punch-outs occur near supports, members must be checked for reduced shear and web crippling in accordance with the AISI S100.
5. Values are for simple span conditions.
6. Stud distortional buckling is based on an assumed $K_f = 0$.

Allowable Ceiling Spans Deflection Limit L/240

* Loads that exceed 10 psf limit require an approved CP60 coating.

Allowable Ceiling Spans Deflection Notes

1. For unbraced sections, allowable moment based on AISI S100 section C3.1.2 with unbraced length = listed span. For mid-span braced sections, allowable moment based on AISI S100 C3.1.2 with unbraced length = (listed span)/2.
2. For spans listed with "e", web stiffeners are required at end reactions. and re-number list of notes
3. Web crippling calculation based on bearing length = 1 inch.
4. Web crippling and shear capacity have not been reduced for punch-outs. If web punch-outs occur near supports, members must be checked for reduced shear and web crippling in accordance with the AISI S100.
5. Values are for simple span conditions.
6. Stud distortional buckling is based on an assumed $K_d = 0$.

Allowable Ceiling Spans Deflection Limit L/360

* Loads that exceed 10 psf limit require an approved CP60 coating.

Header Load Notes

1. Spans are based on continuous support of compression flange over the full length of header.
2. For two equal spans, the listed span is the distance from either end to the center support, with the header continuous over the center support.
3. Header must be braced against rotation at all supports.
4. Web stiffeners required at mid-span supports.
5. Shear capacity at mid-span support has been reduced for the presence of punchouts adjacent to the supports. Mid-span combined bending and shear check based on stiffened web.
6. Total load deflection limited to L/360. Live load deflection limit as noted.
7. Stud distortional buckling based on an assumed $K_f = 0$.
8. Headers consist of two boxed or back-to-back members.

NOTES:

1. Spans are based on continuous support of compression flange over the full length of header.
2. For two equal spans, the listed span is the distance from either end to the center support, with the header continuous over the center support.
3. Header must be braced against rotation at all supports.
4. Web stiffeners required at mid-span supports.
5. Web stiffeners required at mid span supports.
6. Values are for un-punched members.
7. Total load deflection is limited to L/360.
8. Allowable moment, shear and web crippling are based on twice the capacity of a single member. The moment of inertia is based on twice the value of the single member.
9. Web crippling check is based on 1" bearing length at end supports.
10. Allowable loads are for simply supported headers with uniform bending loads only.
11. Headers are made from two "boxed" or "back-to-back" members.
12. "e" web stiffeners are required at ends.

NOTES:

- Spans are based on continuous support of compression flange over the full length of header.
- For two equal spans, the listed span is the distance from either end to the center support, with the header continuous over the center support.
- Header must be braced against rotation at all supports.
- Web stiffeners required at mid-span supports.
- Web stiffeners required at mid span supports.
- Values are for un-punched members.
- Total load deflection is limited to L/360.
- Allowable moment, shear and web crippling are based on twice the capacity of a single member. The moment of inertia is based on twice the value of the single member.

- Web crippling check is based on 1" bearing length at end supports.
- Allowable loads are for simply supported headers with uniform bending loads only.
- Headers are made from two "boxed" or "back-to-back" members.
- "e" web stiffeners are required at ends.

- Allowable moment, shear and web crippling are based on twice the capacity of a single member. The moment of inertia is based on twice the value of the single member.
- Web crippling check is based on 1" bearing length at end supports.
- Allowable loads are for simply supported headers with uniform bending loads only.
- Headers are made from two "boxed" or "back-to-back" members.
- "e" web stiffeners are required at ends.

Section Properties - U Channels

Section	Design Thickness (in)	Gross						Effective Properties 33 ksi				
		Area (in ²)	Weight (lb/ft)	I _x (in ⁴)	R _x (in)	I _y (in ⁴)	R _y (in)	I _x (in ⁴)	S _x (in ³)	M _a (in-k)	V _a (lb)

PROPERTY NOTES:

1. For Deflection calculations, use effective I_{xx}
2. Inside bend radius taken as 3/32".

* Loads that exceed 10 psf limit require an approved CP60 coating.

SPAN NOTES:

1. Fy = 33 ksi for all sections

2. Multiple span indicates two or more equal spans with channel continuous over interior supports

3. Bearing Lengths = 0.75"

4. Allowable spans based on the compression flange laterally unbraced

5. Include Torsion

6. Loads that exceed 10 psf limit require an approved CP60 coating.

Structural Properties for Hat Furring Channels

Section	Fy (ksi)	Design Thickness (in)	Gross Properties						Effective Properties		
			Area (in ²)	Weight (lb/ft)	I _x (in ⁴)	R _x (in)	I _y (in ⁴)	R _y (in)	I _x (in ⁴)	S _x (in ³)	M _a (ft-lb)
087F125-18	33	0.0188	0.070	0.239	0.009	0.356	0.0422	0.774	0.0086	0.0160	26.41

NOTES:

1. Hems and offset in flange, if present, are ignored.
2. Design thickness used for determination of properties. Minimum delivered thickness must be no less than 95% of design thickness.
3. Effective properties are given as the minimum value for positive or negative bending.

NOTES:

1. Single spans taken as the minimum span based on moment, shear, web crippling or deflection
2. Multiple spans indicate two or more equal, continuous spans with span length measured support to support.
3. Multiple spans taken as the minimum span based on moment, shear, web crippling, deflection combined bending and shear or combined and web crippling
4. Web crippling values based on 1" bearing at end and interior supports.
